KINTECHASIA

Kintech EA - Direct mode

Trade the EA Setups yourself

Kintech_EA · Version **1.40** · Updated 2026-11-09
Online version: https://kintech.asia/guide/direct

Contents

Overview

Requirements

1. Install the EA

2. Allow the server address

3. Attach the EA to a chart

4. Choose your setup (SETTINGS tab)

5. Read the SETUPS tab

6. Stop or pause trading

7. Maximum total loss

8. How orders look

9. ERROR LOGS

10. Backtesting

Overview

Direct mode lets Kintech_EA trade by itself on your MT5 account. You choose one **EA Setup** from the list KintechAsia publishes (one setup per account). Each setup is a ready-made trading plan (strategies, money management, maximum loss) that runs on the symbol of the chart you attach the EA to.

> **NOTE**
> Your settings stay on your computer. The trading plan comes from the KintechAsia server, so improvements reach you without reinstalling the EA.

Requirements

- MetaTrader 5 (desktop, Windows) that stays online - a VPS is recommended.
- A **Hedging** account. Netting accounts are refused.
- An active Kintech license for the account number. It is granted the first time the EA connects:
- **10 years** for a REAL account opened through our partner link at **RoboForex** or **Exness**;
- no expiry for other REAL accounts: they run FREE setups, and paid setups need payment;
- demo accounts get a long trial automatically.
- The **Kintech_EA.ex5** file.

1. Install the EA

1. In MT5 open **File > Open Data Folder**, then go to **MQL5 > Experts**.
2. Copy **Kintech_EA.ex5** into that folder (a sub-folder such as KintechEA is fine).
3. Back in MT5, right-click **Expert Advisors** in the Navigator and choose **Refresh**.

2. Allow the server address

Open **Tools > Options > Expert Advisors** and:

- Tick **Allow algorithmic trading**.
- Tick **Allow WebRequest for listed URL** and add:
- **https://kintech.asia**
- Press **OK**, then make sure the **Algo Trading** button on the toolbar is green.

> **IMPORTANT**
> Without this step the EA shows "No connection to the server" and does nothing.

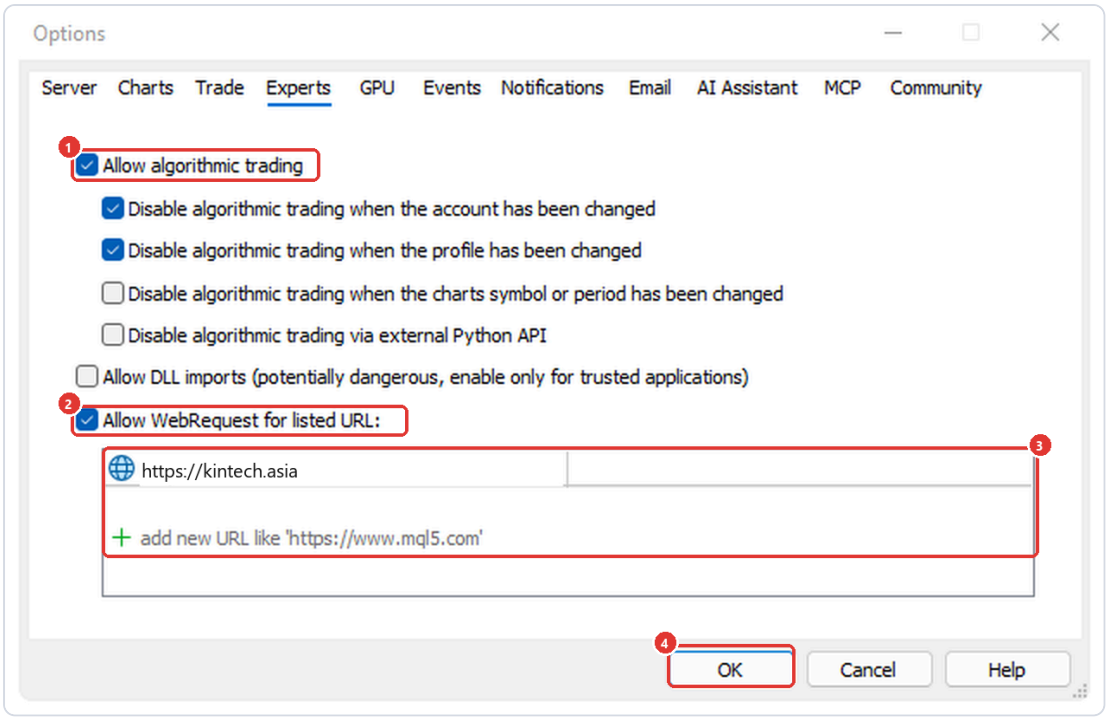

Figure 1. Tools > Options > Expert Advisors

1. Allow algorithmic trading
2. Allow WebRequest for listed URL
3. Add the server address
4. Press OK

Figure 2. The Algo Trading button on the toolbar must be on (green)

3. Attach the EA to a chart

1. Open the chart of the symbol you want to trade, for example **XAUUSD**. Any timeframe works.
2. Drag **Kintech_EA** onto the chart.
3. **Common** tab: tick **Allow Algo Trading**.
4. **Inputs** tab:

INPUT	VALUE
License server	**https://kintech.asia**
Mode	**Direct**
Panel	**true**

5. Press **OK**. The Kintech EA panel appears in the top-left corner of the chart.

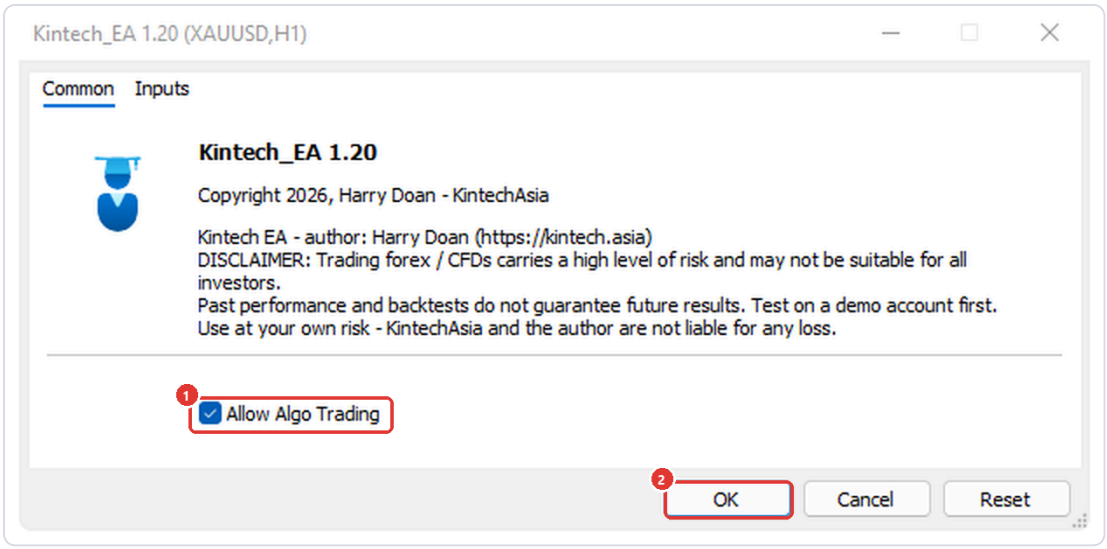

Figure 3. EA window - Common tab

1. Tick Allow Algo Trading
2. Press OK after filling in the Inputs tab

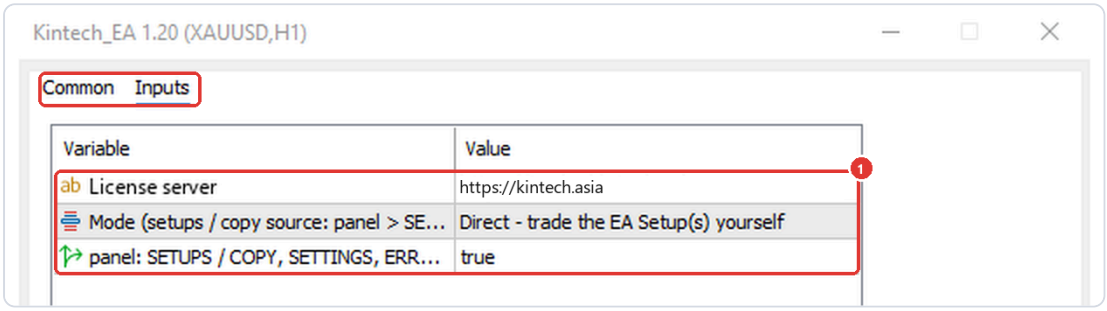

Figure 4. EA window - Inputs tab (Direct mode)

1. License server https://kintech.asia · Mode Direct · Panel true

4. Choose your setup (SETTINGS tab)

The first time, the panel opens on the **SETTINGS** tab.

FIELD	WHAT TO ENTER
EA SETUP	Click the box to open the list of published setups (scroll with ▲ ▼, the bar or the mouse wheel): code, price (**FREE** or **$/month**), **Min/SL** = minimum capital = stoploss of the setup. Click a row to choose it. The line below shows the chosen setup and your balance. ✕ = no setup on this chart. **RELOAD** loads the list again
COPY MASTER KEY	Only for the copy master account (KintechAsia gives you the key). Leave it empty otherwise. After SAVE only the last 4 characters are shown
MAX SPREAD (points)	New chains and new levels open only when the spread is at or below this value, for every slot. **Empty** = use the max spread of the setup. **0** = no spread limit
AUTO LOT-SIZE	**ON** = the start lot of new chains is sized from your balance: balance x % / max total loss of the setup x 0.01 (at least the broker's min lot). **OFF** = the setup's lot. Open chains keep their lot. Needs a setup with a max total loss

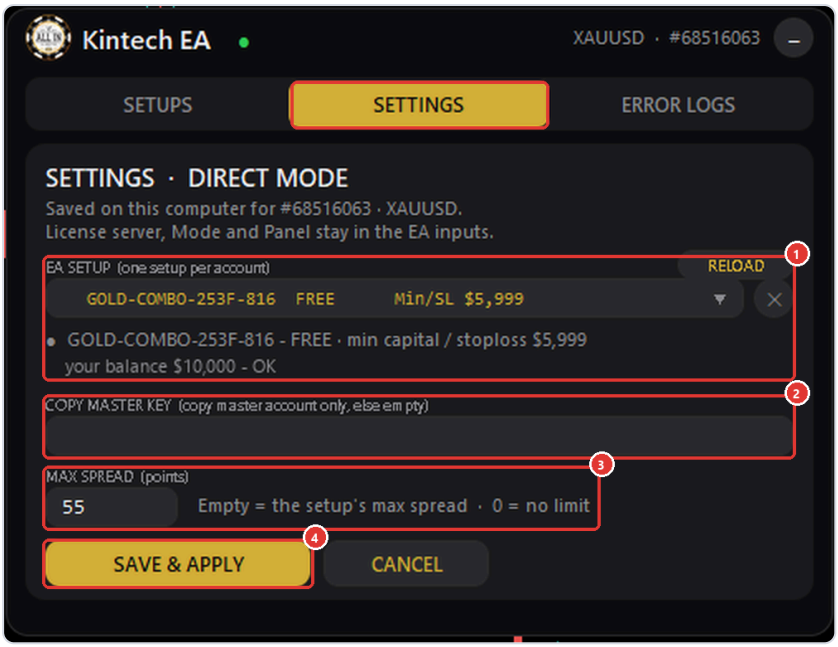

Figure 5. SETTINGS tab - Direct mode

1. EA SETUP: click the box to choose one setup (price, Min/SL = minimum capital = stoploss); the line below shows your balance
2. COPY MASTER KEY: copy master account only
3. MAX SPREAD (points): empty = the setup's max spread, 0 = no limit
4. SAVE & APPLY

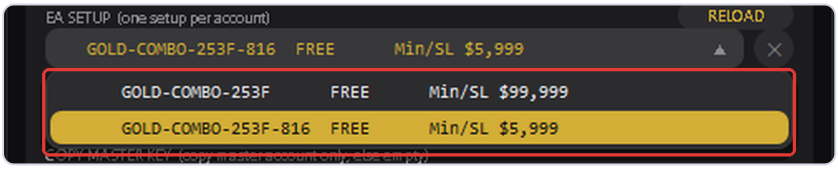

Figure 6. The setup list (opens over the fields below) - scroll with ▲ ▼, the bar or the mouse wheel

Press **SAVE & APPLY**. The setup connects immediately. **CANCEL** discards changes that are not saved.

- **Balance below the minimum capital**: the EA warns you and asks whether to run the setup anyway.
- **Paid setup**: the EA asks you to confirm, then shows **WAIT PAYMENT** and opens no orders. Pay via Telegram **@kintechasia_official** or **@kintechasia_backup** (send your account number and the setup code). As soon as KintechAsia confirms the payment, the setup starts by itself and runs until the paid months end.

> **TIP**
> Settings are saved for this account and symbol on this computer. They are still there after you restart MT5 or attach the EA again.

One setup per account. Each account runs one setup at a time, on one chart.

- **Switching setup**: choose another setup and press SAVE & APPLY. If the old setup has no open orders, the new one starts at once. Otherwise the EA asks you to confirm. The old setup shows **REMOVING**: it opens no new chains and keeps managing the open ones until they close. The new setup shows

WAITING and starts by itself once those orders are closed. Choose the old setup again to cancel the switch.

- **Removing the setup**: press ✕, then SAVE & APPLY. Open orders are managed until they close.
- **Another chart or terminal** of the same account that tries to run a setup shows **WAITING** and opens nothing until the running one is removed.

5. Read the SETUPS tab

The setup has a card (a second card appears only while you switch setup):

- **Header**: setup code, status, and a **Trade on / off** switch for this setup (green = on).
- **Info line**: version, run number and magic number. **Auto lot: 0.02** appears when AUTO LOT-SIZE is on (SETTINGS) and shows the start lot of new chains.
- **P/L**: profit of all open orders of the setup. **MAX LOSS**: the loss at which everything is closed. **SPREAD**: current spread. **SERVER**: time since the last server answer.
- **Slot table**: every strategy (slot) of the setup with an **on / off switch** (green = on), the open chains (B = BUY, S = SELL) and the current signal.

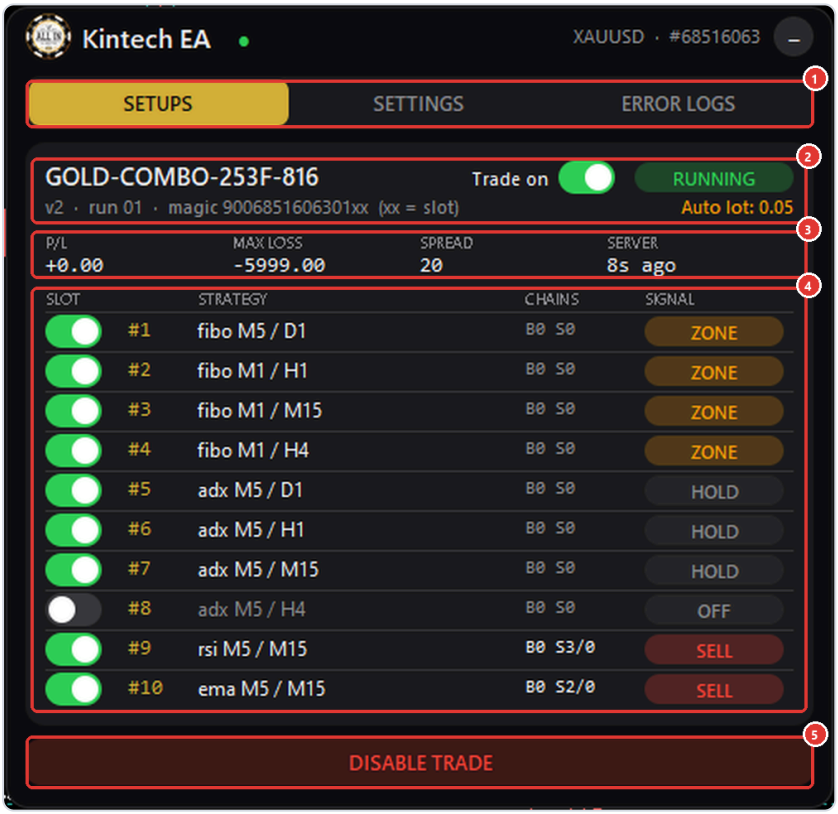

Figure 7. SETUPS tab

1. Tabs: SETUPS, SETTINGS, ERROR LOGS (with the number of new entries)
2. Setup code, Trade on / off switch, status, and the info line
3. P/L, MAX LOSS, SPREAD, SERVER
4. Slot table: on / off switch, strategy, open chains, signal
5. DISABLE TRADE - no new chains on this chart (section 6)

STATUS	MEANING
RUNNING	Trading normally
CONNECTING	Contacting the server
STANDBY	The same setup already runs on another chart or terminal for this account. This chart takes over about 2 minutes after the other one stops
SETUP OFF	Trading is disabled for this setup: no new chains, open chains are still managed
PAUSED	Maximum total loss was reached and every order was closed. Press **RESUME** to continue
MANAGE ONLY	License not valid: open chains are managed, no new chains
REMOVING	Removed in SETTINGS, waiting for its open chains to close
WAITING	One setup per account: waiting for the open orders of the old setup to close (switching), or another chart / terminal already runs a setup for this account
OFFLINE	Server not reachable for a while. Open orders stay; the EA syncs again when the server is back
WAIT PAYMENT	Paid setup waiting for the payment confirmation: no new chains
EXPIRED / NOT PAID	The paid months ended, or the payment was not confirmed: no new chains, open chains are managed until they close
STOPPED	The server refused the setup - remove it in SETTINGS

SIGNAL	MEANING
BUY / SELL	All indicators of the slot agree - a new chain can open
HOLD	Indicators do not agree - waiting
ZONE	Price zone strategy - waiting for price to enter the zone
SPREAD	Spread is above the slot limit - waiting
OFF / NO NEW	The slot or the setup does not open new chains

Timeframes per slot. The strategy column shows the timeframes of the slot, for example **fibo M5 / D1** = TradeTF M5, TrendTF D1. Click the name (▾) to choose your own TradeTF and TrendTF for that slot (TrendTF must be higher than TradeTF); **DEFAULT** goes back to the timeframes KintechAsia set. A gold name = your own timeframes. The choice is saved on this computer, the Strategy Tester uses it too, and it applies to new chains only - open chains keep running.

Virtual orders. Some setups start real orders only from a later level of the chain (the level can differ between slots). The chain column then shows two numbers, for example **B7/3**: the full chain has 7 levels and 3 of them are real orders.

6. Stop or pause trading

- **DISABLE TRADE** (button at the bottom of the SETUPS tab): no new chains on the setup of the chart. Open chains keep being managed - new levels and take-profit included - until they close. With no real

orders open, virtual chains are closed at once. Click again to enable.

- **CLOSE ALL** (next to DISABLE TRADE): closes every real order and virtual chain of the setup on the chart right now, after you confirm. Trade stays as it is: if it is enabled, new chains can open right away, so press DISABLE TRADE first to stop them.
- **Trade on / off** switch on a setup card: the same, for one setup only.
- **On / off switch** in the slot table: the same, for one strategy only.

These switches are saved on the KintechAsia server for your account, so they survive restarts.

> **IMPORTANT**
> Do not close single orders of a chain by hand and do not remove the EA while chains are open. The EA manages a chain as a whole - take-profit, new levels and maximum loss depend on every order of the chain.

7. Maximum total loss

Every setup has a maximum total loss in money. When the open orders of the setup reach it, the EA **closes every order of the setup** and shows **PAUSED** with a **RESUME** button. Nothing new opens until you press RESUME. If the server cannot be reached at that moment, the EA still closes everything by itself.

8. How orders look

- Comment: **KintechAsia-XAUUSD01|3** = symbol, slot 01, level 3 of the chain.
- Magic number: 9 + account number + run + slot. Do not change it.
- When a chain is closed, all its orders are sent to the broker at the same moment.

Symbol	Time	Type	Volume	Price	Profit	Comment
xauusd	2026.10.28 15:43:14	sell	0.01	4048.52	-0.64	KintechAsia-XAUUSD05|1
xauusd	2026.10.28 15:45:02	buy	0.01	4049.80	-0.84	KintechAsia-XAUUSD10|1
xauusd	2026.10.28 15:45:04	buy	0.01	4049.55	-0.59	KintechAsia-XAUUSD03|1
xauusd	2026.10.28 15:45:13	sell	0.01	4049.02	-0.14	KintechAsia-XAUUSD03|1

Figure 8. MT5 Toolbox > Trade: the Comment column shows KintechAsia-<symbol><slot>|<level>

9. ERROR LOGS

The **ERROR LOGS** tab lists problems, newest first. A short connection drop is listed as an info line; it counts as a problem when it lasts more than about 10 seconds. **CLEAR** empties the list.

MESSAGE	WHAT TO DO
No connection to the server	Add the server address to WebRequest (step 2) and check the internet
Network error 1003 ... retrying	The connection dropped - the EA retries by itself
A HEDGING account is required (Experts tab, the EA does not start)	Open a Hedging account with your broker

MESSAGE	WHAT TO DO
Setup ... does not exist / no published version	Check the code in SETTINGS or contact us
Not enough margin	The order is retried after 60 seconds - add funds or lower the risk
Market closed	Normal outside trading hours

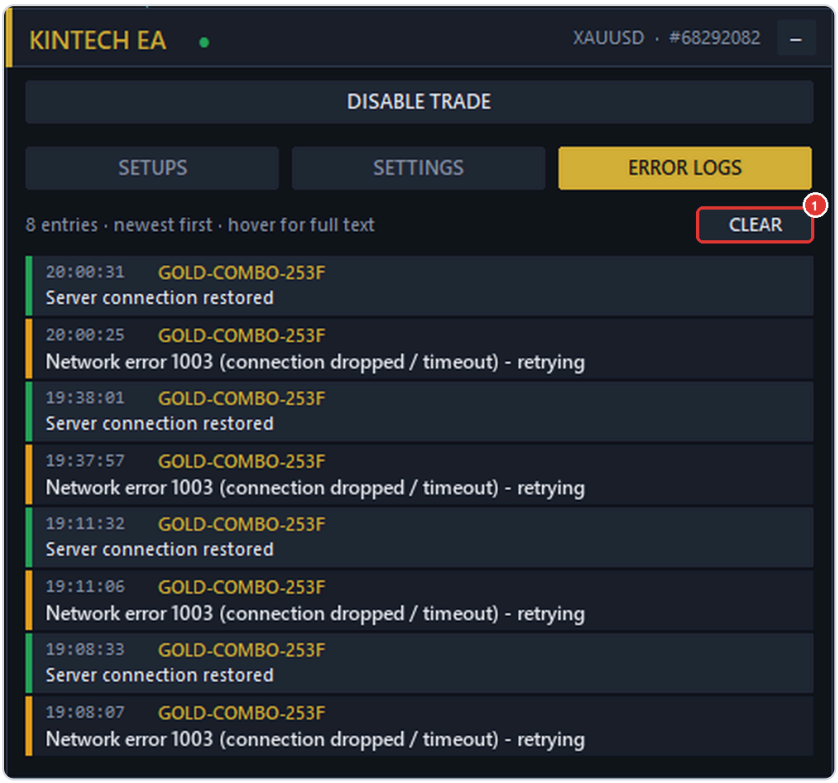

Figure 9. ERROR LOGS tab - orange = problem, green = solved

1 CLEAR empties the list

10. Backtesting

Kintech_EA backtests in the MT5 **Strategy Tester** with the setup you chose. No DLL is needed.

1. Keep Kintech_EA running on a **live chart** of the same account and symbol in this terminal, with the setup chosen in SETTINGS. The Strategy Tester cannot connect to the internet, so it asks the KintechAsia server through this chart.
2. Open the Strategy Tester (**Ctrl+R**) and choose **Kintech_EA**, the symbol and the dates.
3. Modelling: **Every tick based on real ticks**. Keep the default inputs (Mode = Direct).
4. Press **Start**.

> **NOTE**
>
> The test uses the setup selected on the live chart. To test another setup, choose it in SETTINGS first (the live chart then trades that setup too). The account license must be valid. A test only reads trading plans - it does not change your live run.

The test asks the server at every new bar and order level, so one day of testing takes a few minutes, depending on your internet.

MESSAGE (STRATEGY TESTER JOURNAL)	WHAT TO DO
no setup chosen for account ...	Attach Kintech_EA to a live chart of that account and symbol and choose the setup in SETTINGS
no answer - keep Kintech_EA running on a live chart	The live chart was closed or Algo Trading is off - turn it on and start again
license not valid	Run Kintech_EA live on this account first, or contact us
